

# Take advantage of our Medical Scientific Laboratory Services (SLS) support.

**Contact us**

## **Simulated Clinical Infusion**

We offer tests to determine the liquid handling capabilities of IV filters during simulated clinical infusion.

## **Drug Binding Studies**

Drug substance or formulation materials may adsorb to membrane, filter, or device components. We conduct studies in consultation with our clients to simulate the intended application and determine adsorption.

## **Forensic Analysis**

We have analytical techniques (Scanning Electron Microscopy and Energy Dispersive Spectrometry, SEM/EDS) at our disposal to support root cause analysis of infusion filter blockage events.
